SUMMARY

Dedicated and efficient Java Developer with 3.6 years of experience, specializing in developing robust, scalable backend systems using Spring Boot. Proficient in building RESTful APIs, integrating with relational databases such as MySQL and PostgreSQL, and implementing secure authentication using JWT and OAuth2. Experienced in working within Agile teams and delivering production-ready code. Primarily focused on backend development, with the ability to implement Angular-based frontend features (excluding UI/UX design). Strong problem-solving skills and a passion for clean, maintainable code.

Technical Keywords: Java, Spring Boot, Microservices, Docker, Angular, Swagger, MySQL, PostgreSQL, Kafka, CI/CD, Jenkins, GitHub Actions, REST APIs, OAuth2, JWT, Hibernate, JPA, AWS

EXPERIENCE

Senior Java Developer

VARELI TECNAC Pvt. Ltd.

📅 2022 - Present 📍 Kolkata, West Bengal, IN

A technology-driven company specializing in industrial automation, IT solutions, and infrastructure services across various sectors.

- Engineered and deployed monolithic and scalable microservices using **Spring Boot** and **Docker** for enterprise-grade applications.
- Led the migration of a legacy ERP monolith to modular Spring Boot microservices, enhancing system scalability and maintainability.
- Orchestrated** integrated third-party APIs, resulting in a **30% improvement in system latency** and overall performance.
- Implemented **Spring Security** with JWT and OAuth2 for robust authentication and role-based access control.
- Contributed to frontend integration by implementing business logic and API communication using **Angular** (excluding design aspects).
- Authored and maintained** unit and integration tests using **JUnit** and **Mockito**, achieving over **80% test coverage**.
- Collaborated on CI/CD pipeline setup with **Jenkins**, though primary focus remained on development.

ACTIVE PROJECTS

V-Integrate – ERP Microservices Migration

Backend development for migrating the company's monolithic ERP system to a microservices architecture using Java 11, Spring Boot, and Kafka. Focused on purchase and stock modules, API integrations, and database modernization.

- Improved system scalability, performance, and maintainability while working with a team of 6 developers in daily Agile sprints.

Volly – Sports Video Review System (IoT + Backend)

Developed a Raspberry Pi-based system that records the last 50 seconds of video on button press, using Python for capture and Java for backend processing. Used Angular for data management and user interface.

- Enabled coaches and teams to review sports footage instantly, enhancing training feedback through on-demand video recall.

SKILLS

Languages

Java (8/11/17), SQL, HTML, TS

Frameworks

Spring, Spring Boot, AngularJS, Angular, Hibernate, JPA

Databases

MySQL, PostgreSQL, MongoDB

Cloud & Infrastructure

Microservices Architecture, AWS (EC2, S3, Lambda), CI/CD, Jenkins, GitHub Actions

Tools & Platforms

Git, Docker, Jira, Maven, VS Code

STRENGTHS

Problem Solving

Successfully led a team to identify and rectify bottlenecks in production line, increasing efficiency by 20%.

Project Management

Oversaw a team of 6 engineers to deliver a complex project ahead of deadline, improving team productivity and stakeholder satisfaction through effective planning, risk mitigation, and clear communication.

Innovation

Designed an automated raw material procurement system that reduced assembly time by 30%, and built a past video recording solution using Python and Java for on-demand footage review in sports management, improving operational tracking and decision-making.

EDUCATION

Bachelor of Technology
in Electrical
Engineering

Academy of Technology

📅 2013 - 2017

GPA
